

## Download Primavera P6 Professional for Windows Free from Oracle

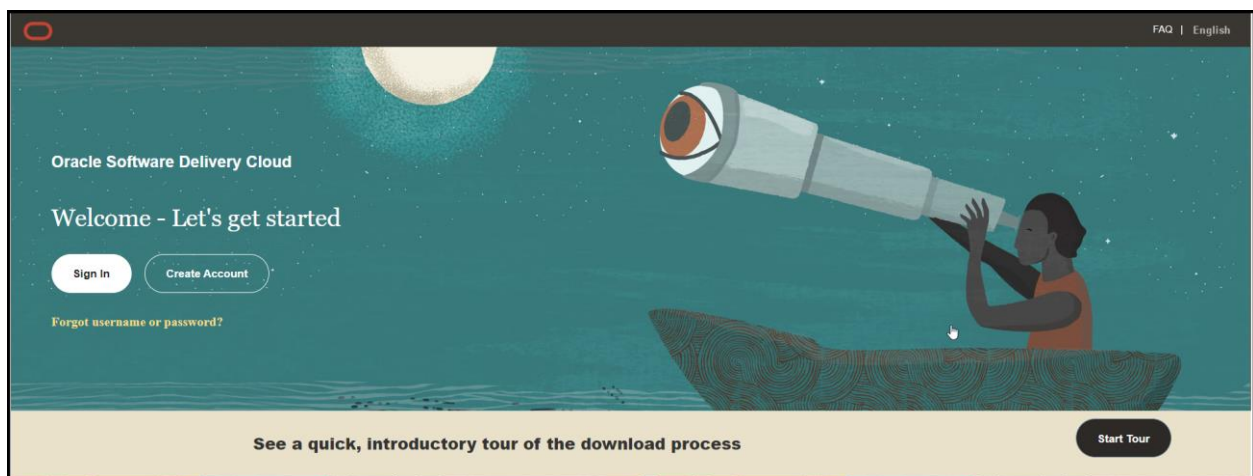

### Step by Step

Oracle Primavera P6 is a scheduling tool used to develop a time schedule using the Gantt chart and PDM methods. The software is developed by Oracle Primavera and they offer a trial version on their website for nonprofit organizations and individuals.

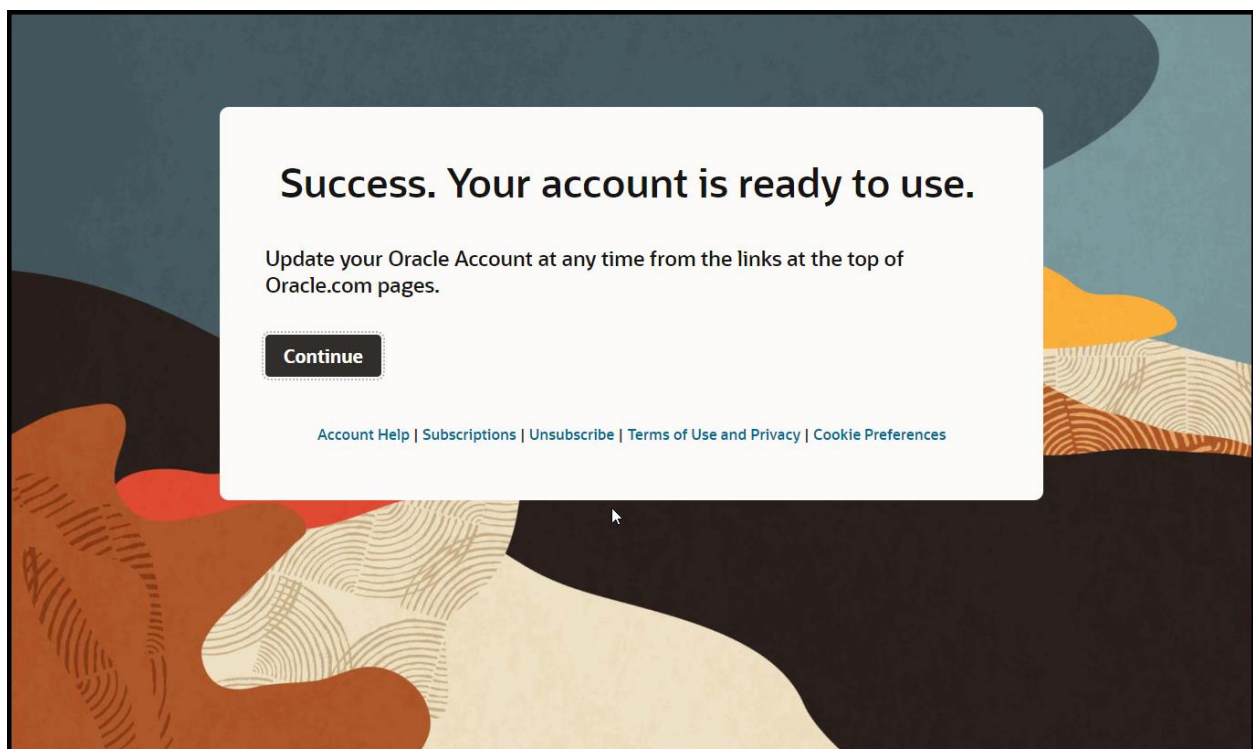

### How to download Primavera P6 to your PC

From Google, search for "Oracle Software Delivery Cloud".

Choose "Sign in" or create an account, if you don't have one.

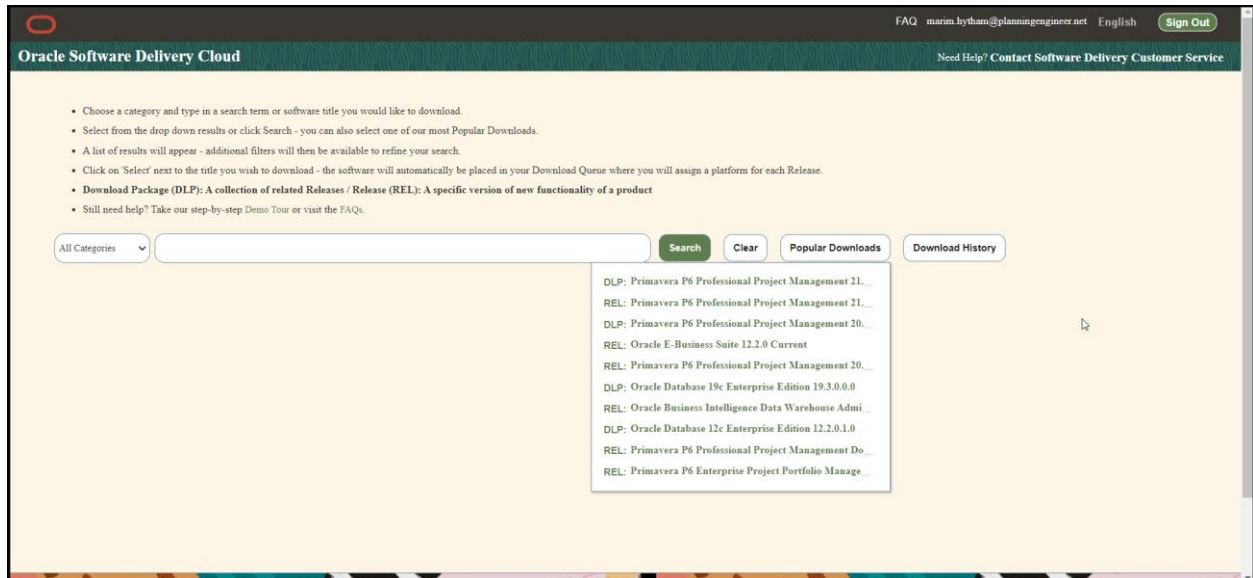

After creating a new account with your information, verify your account and then sign in.

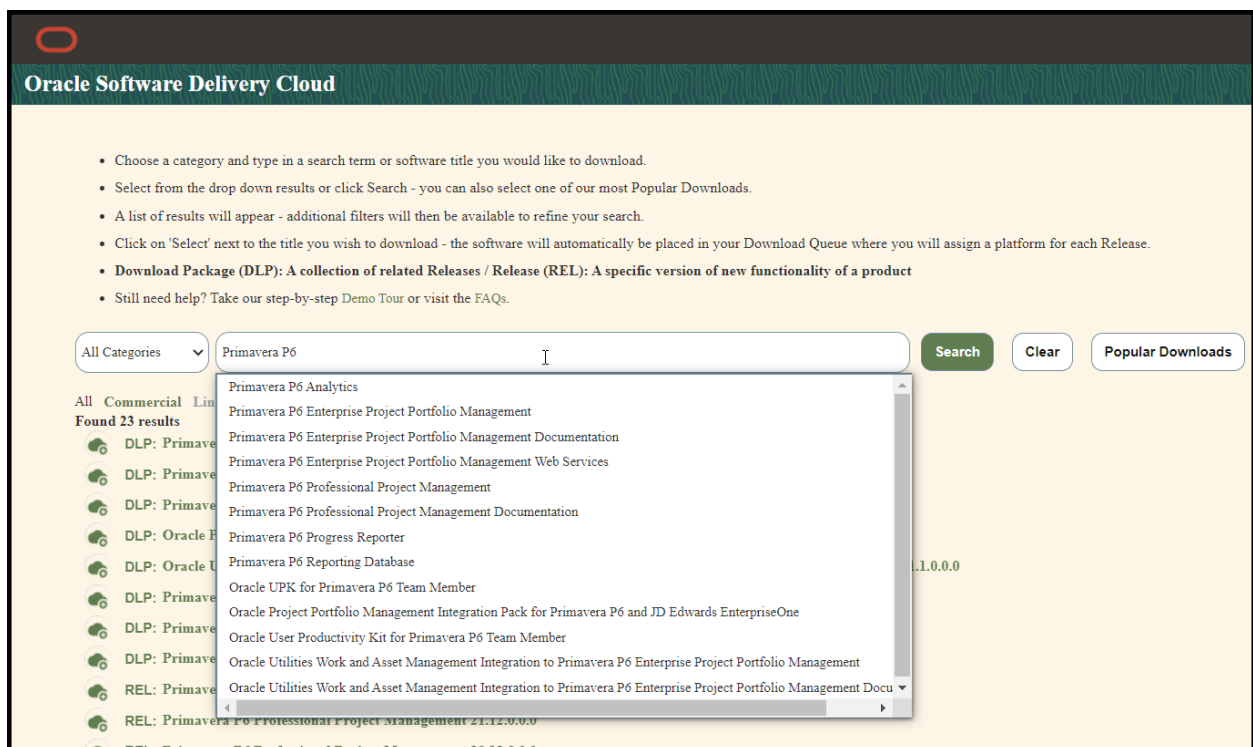

This page will show up after you sign in to Oracle Software Delivery Cloud.

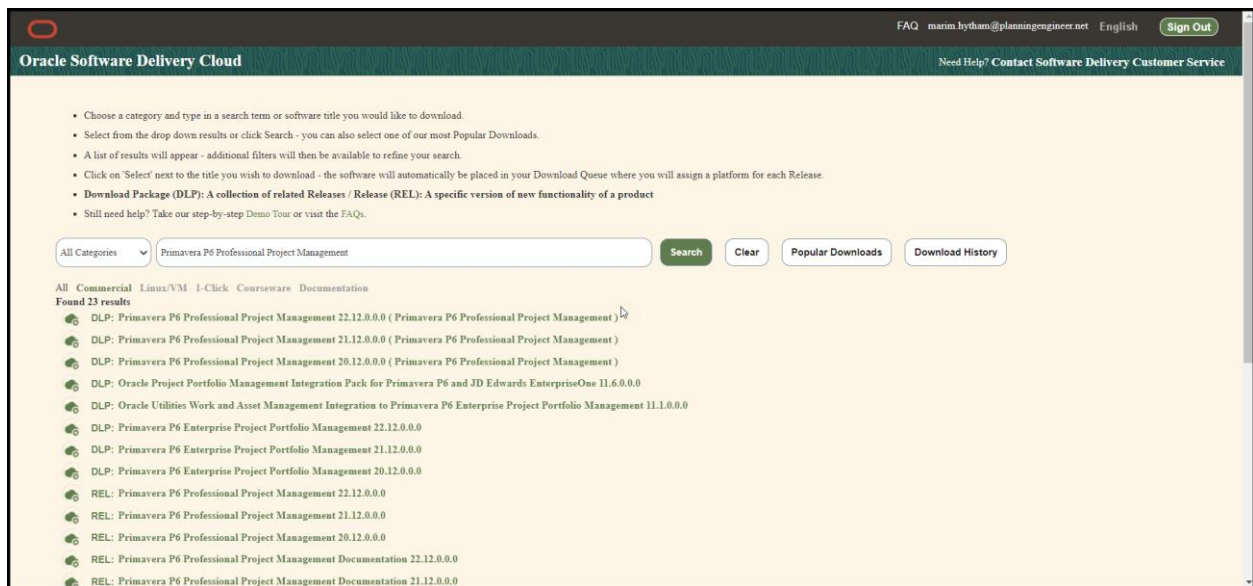

Type “Primavera P6” and choose “Primavera P6 Professional Project Management”.

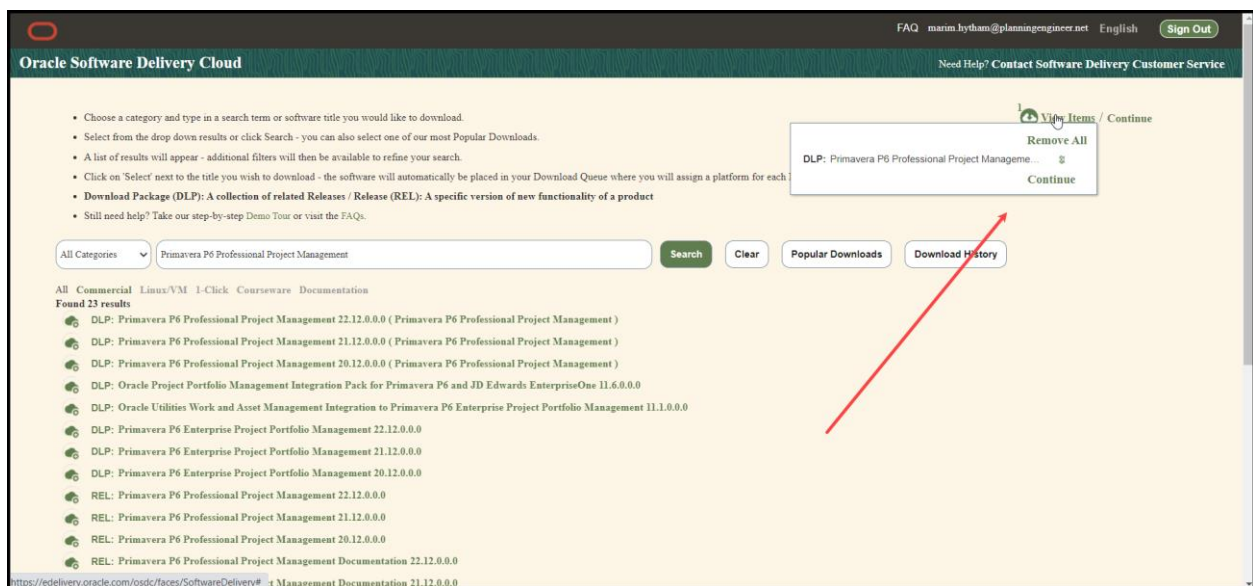

Choose the latest one (22.12.0.00), then right-click on it.

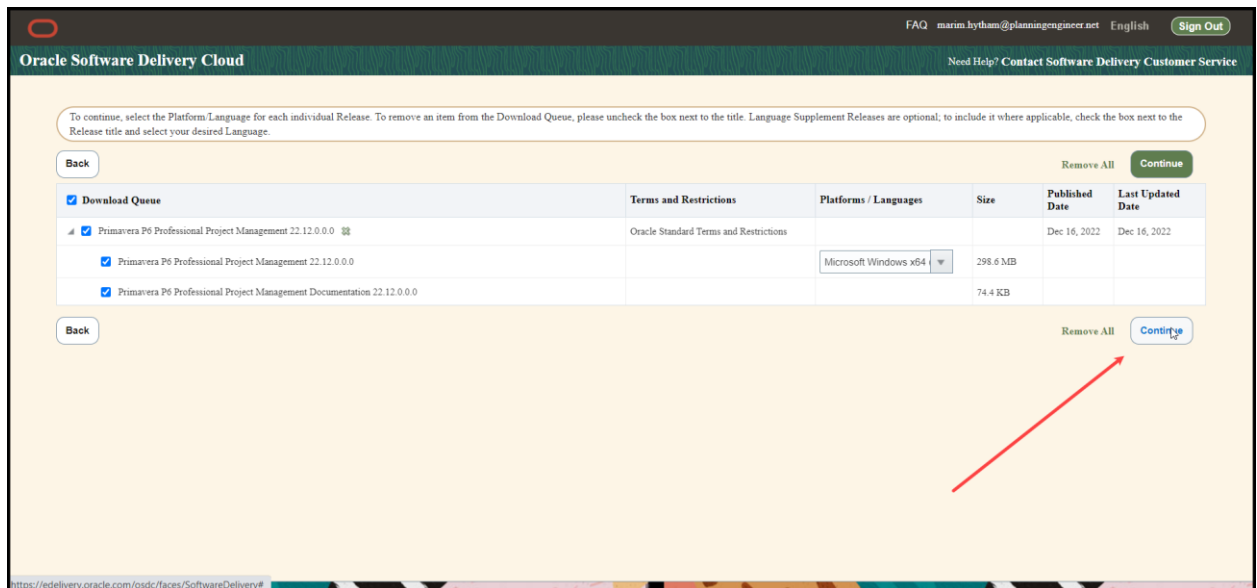

Then, hover on “View Items”, It will show the selected version, click on “Continue” to download Primavera.

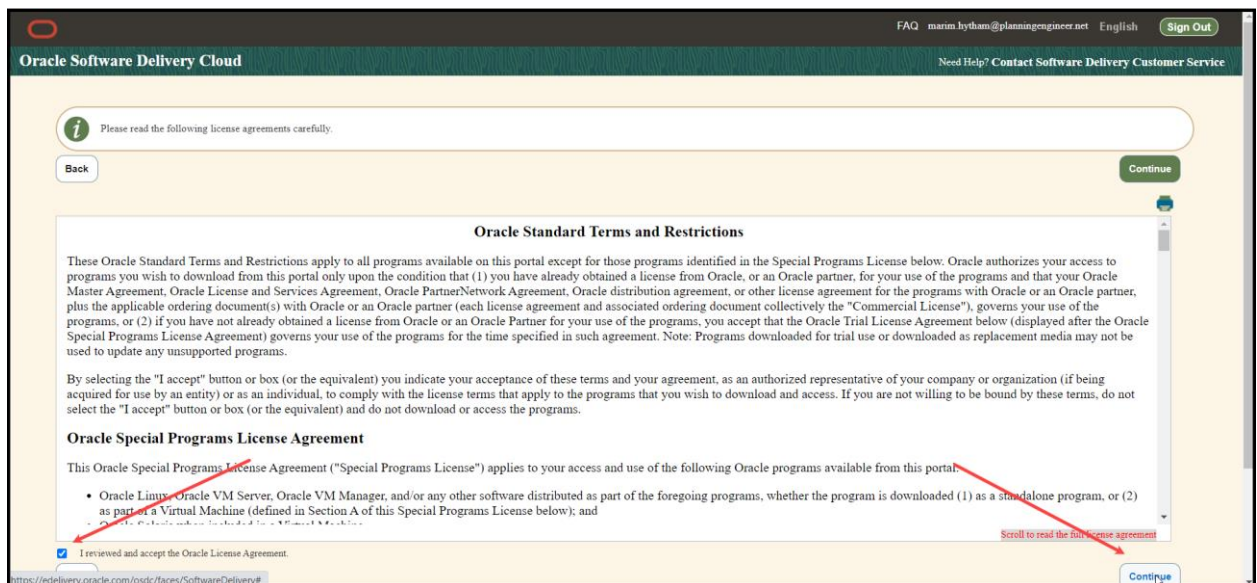

After clicking on “Continue”, this page will show up, make sure all the formats are the same then click on “Continue”.

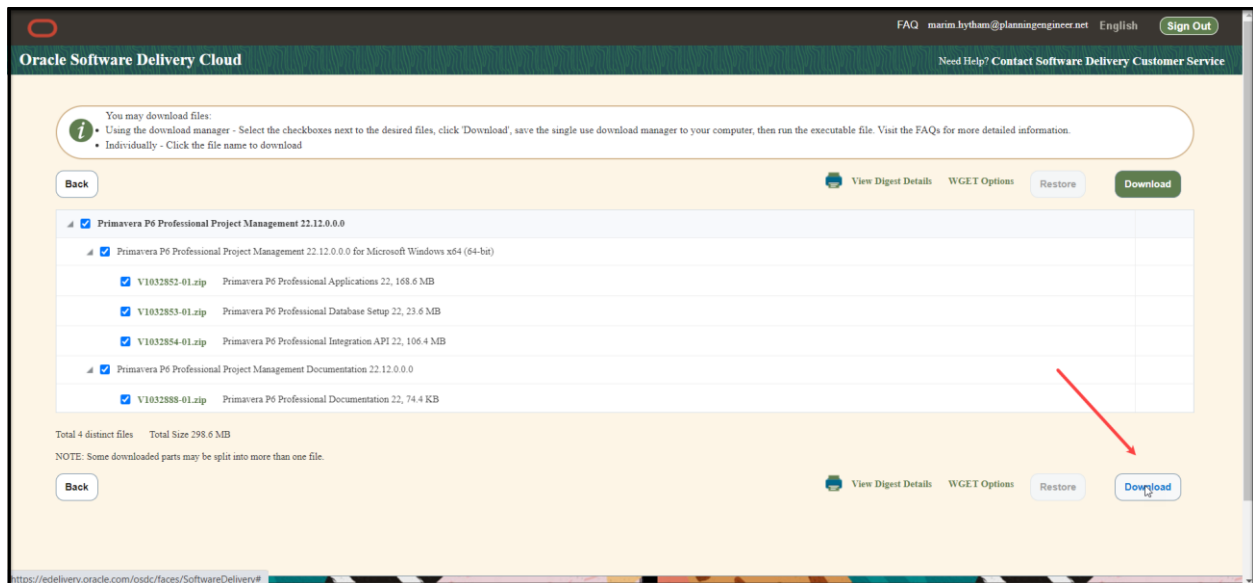

Then, you should accept “Oracle Standard Terms and Restrictions”, and press “Continue” to complete the process of downloading.

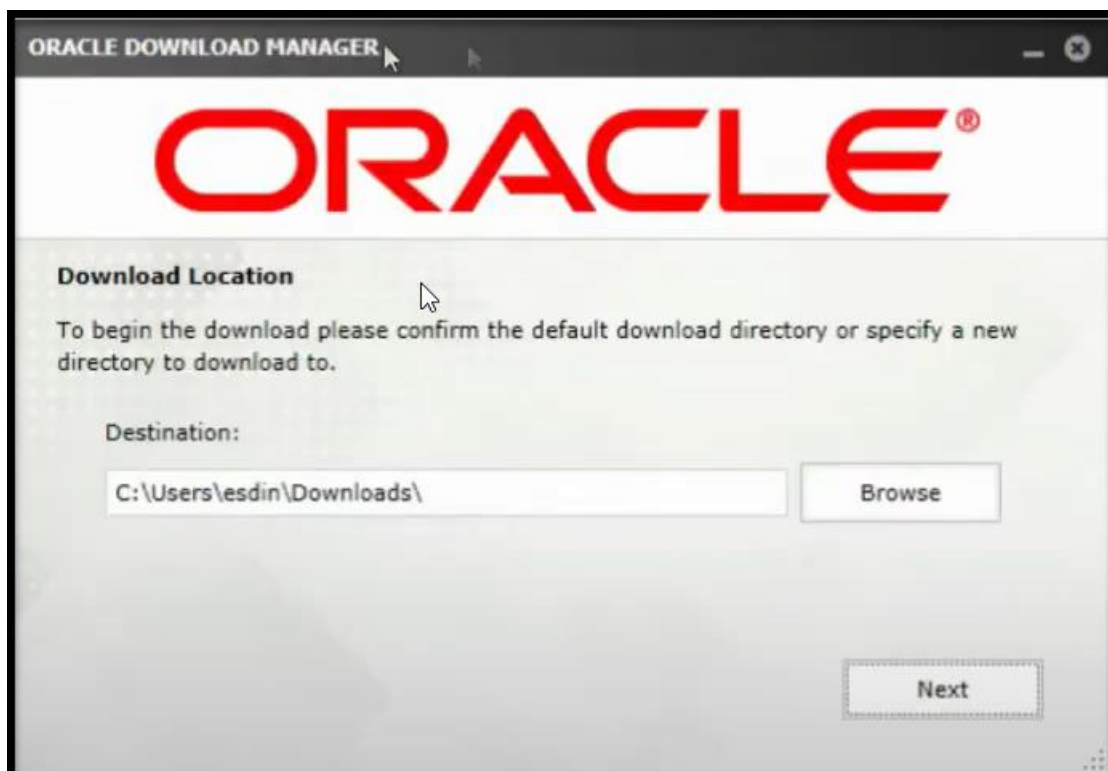

Click on "Download" and the Primavera will be downloaded in the downloads in your PC or laptop.

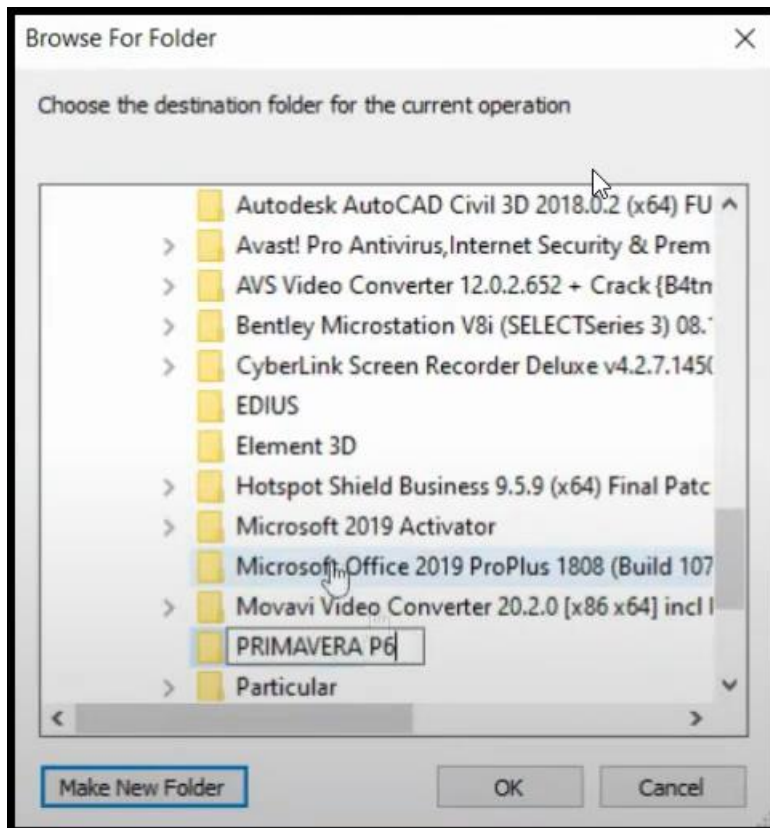

After clicking on the downloaded Primavera P6, choose "Open".

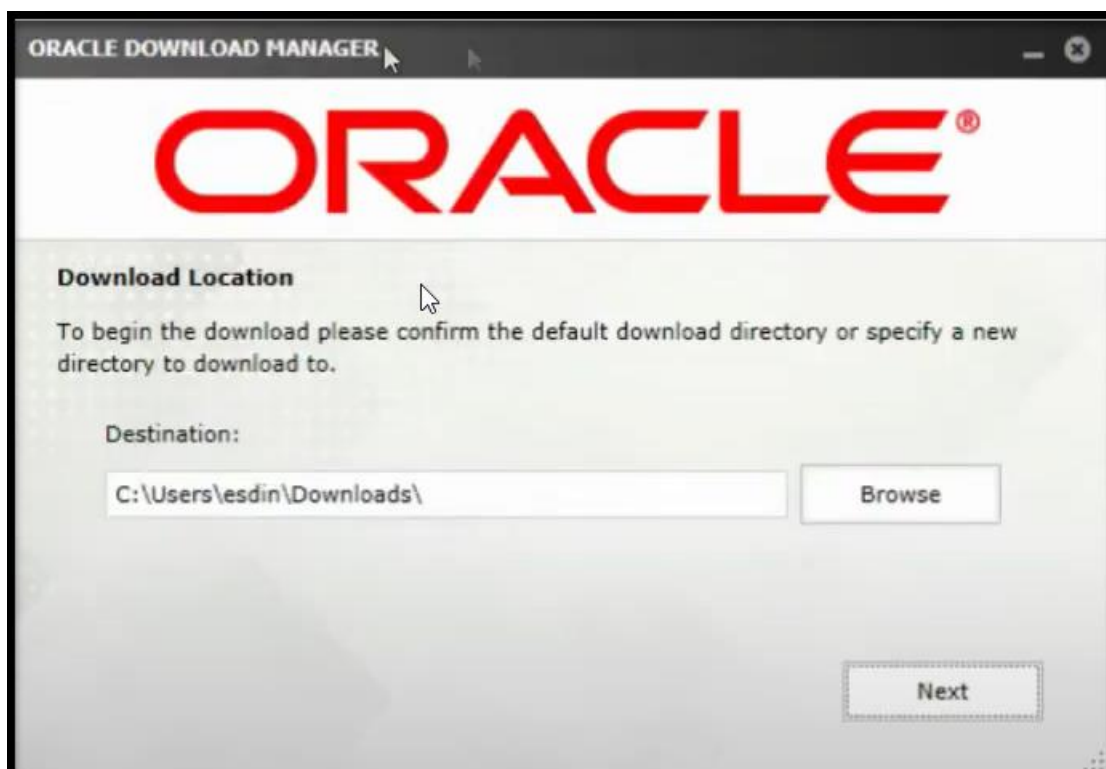

Click on “Browse” to choose the location of the Primavera file on your PC, then select the folder and click on “OK”.

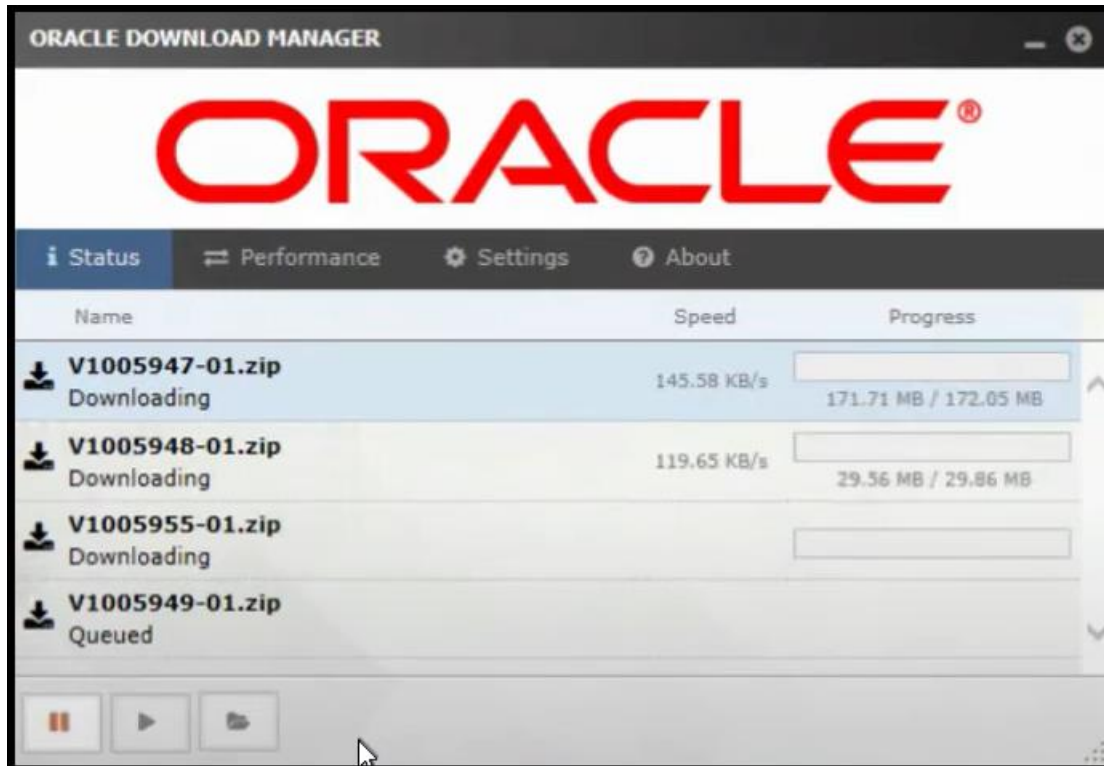

Then, choose “Next” to start downloading the Primavera.

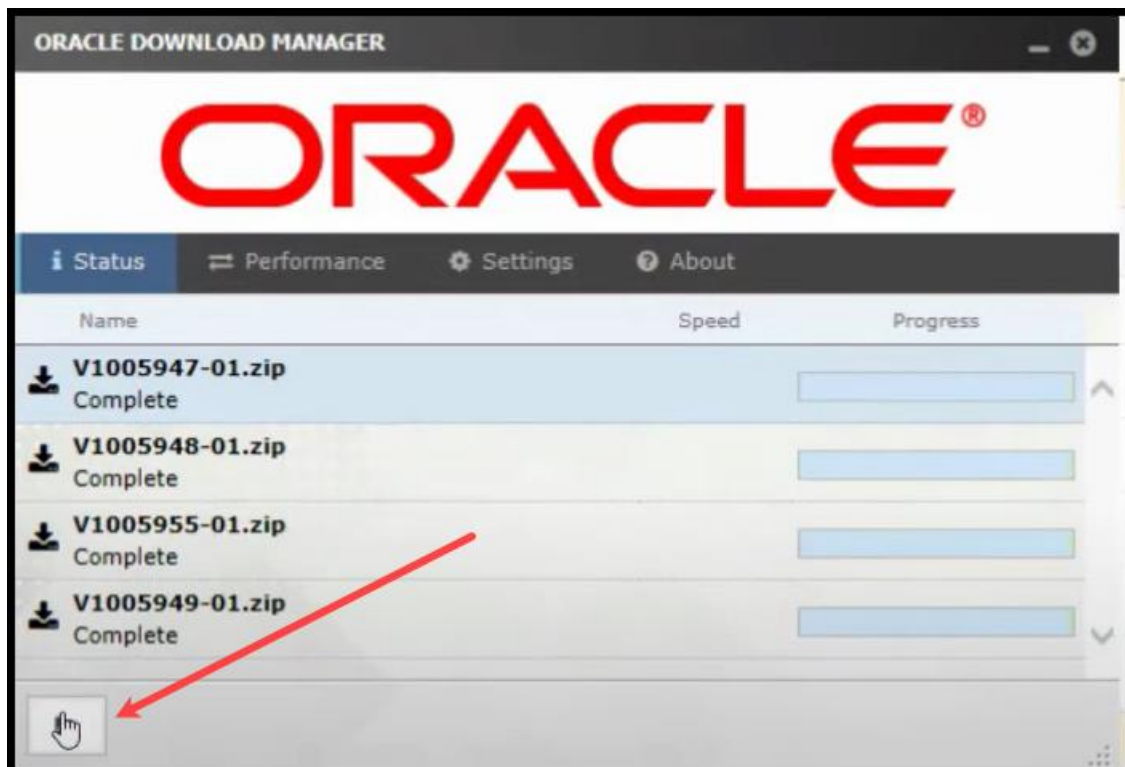

This will show up, do not close it till it finishes downloading all the files.

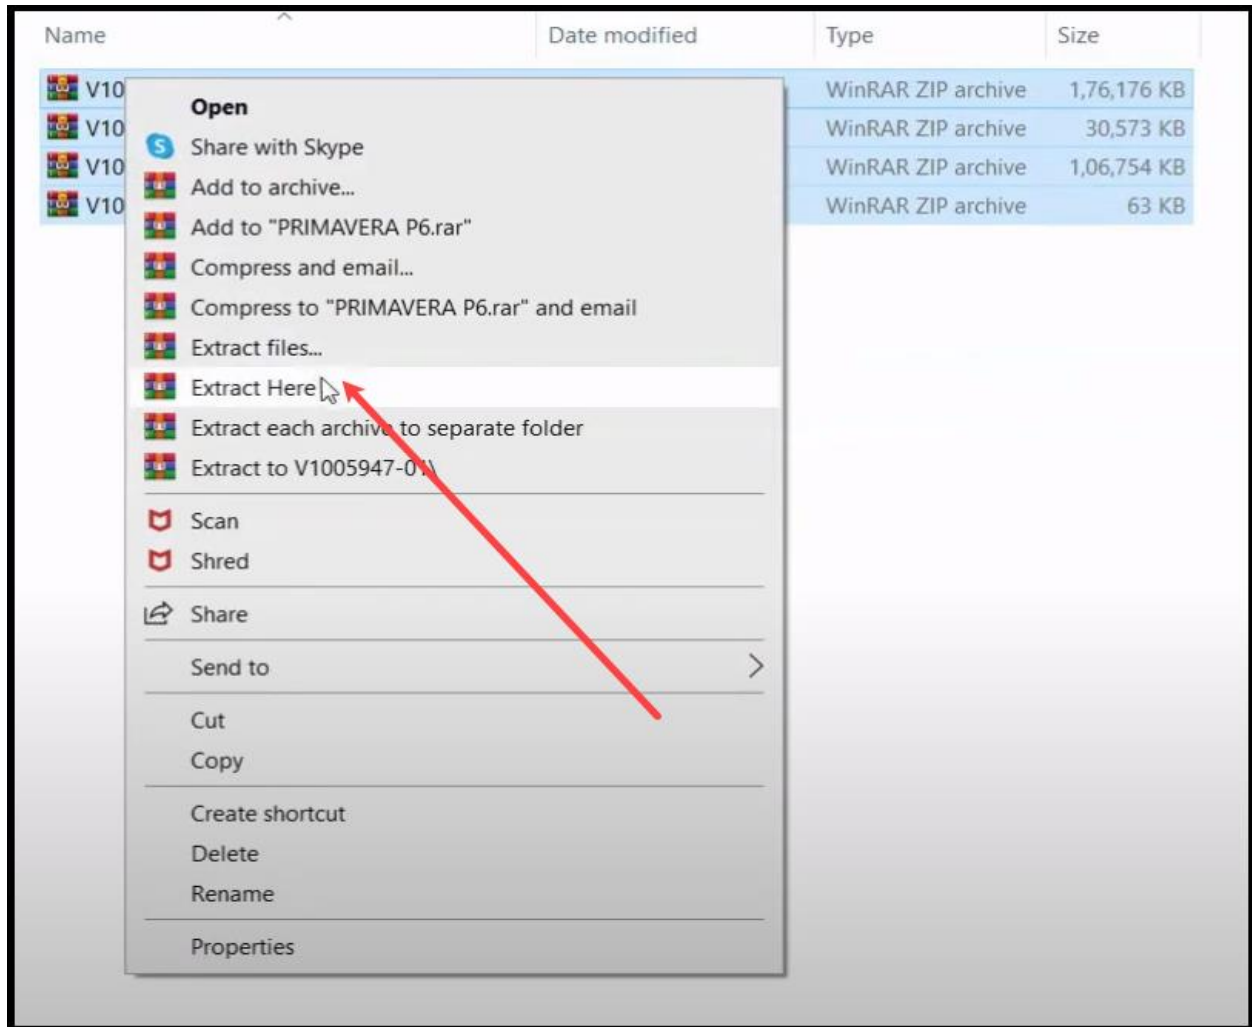

When the download is completed, click on this button.

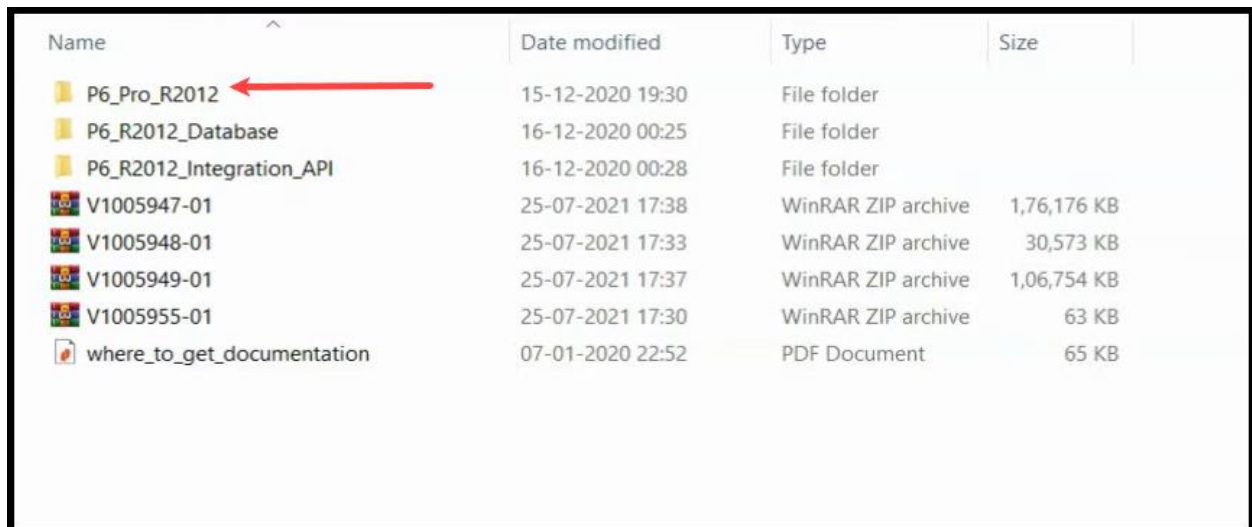

You will extract the downloaded files.

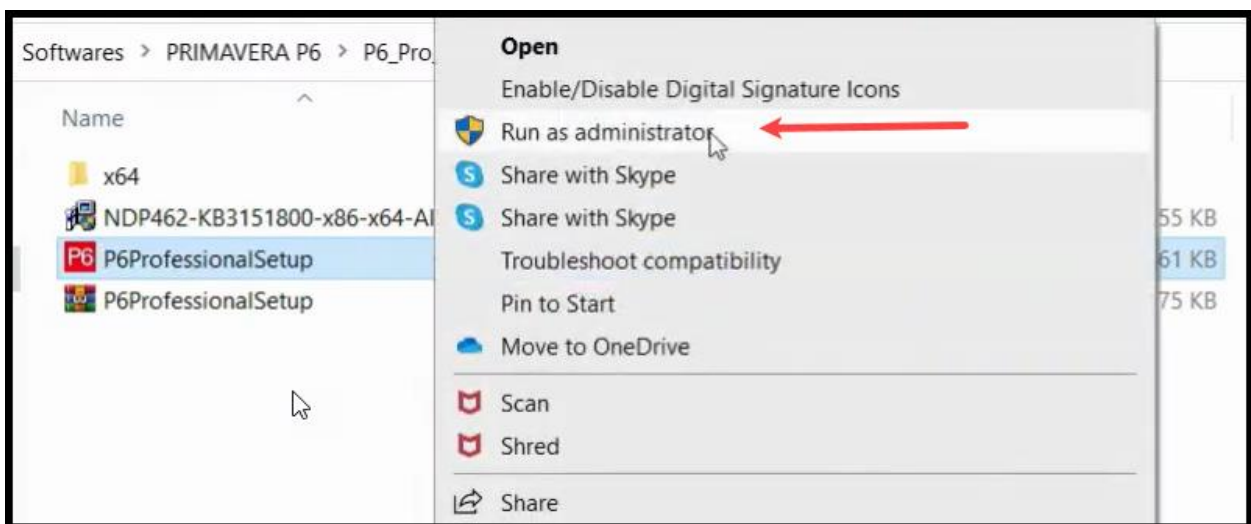

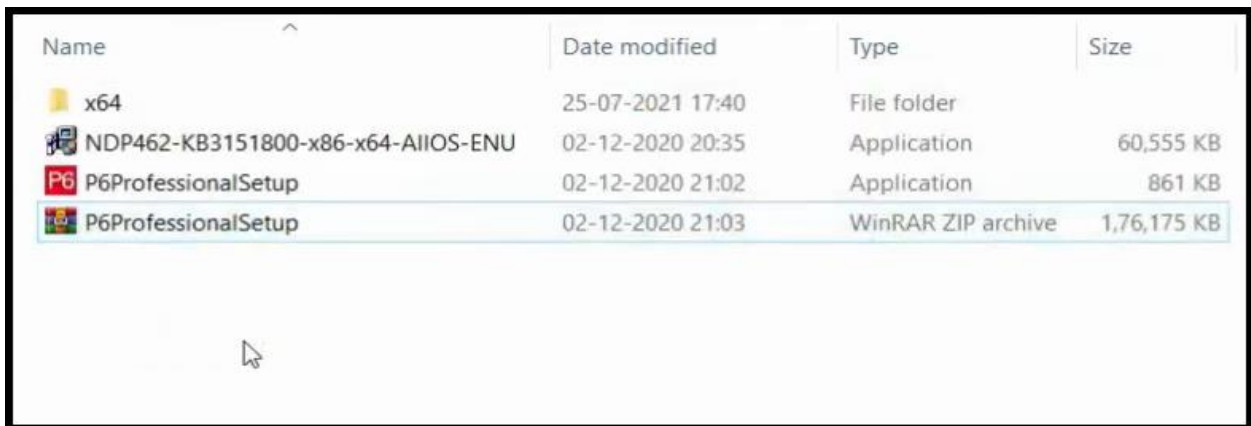

These are the files after extraction and here you will find the Primavera.

After extracting the Primavera file, right-click on “P6 Professional Setup”, then choose “Run as administrator”.

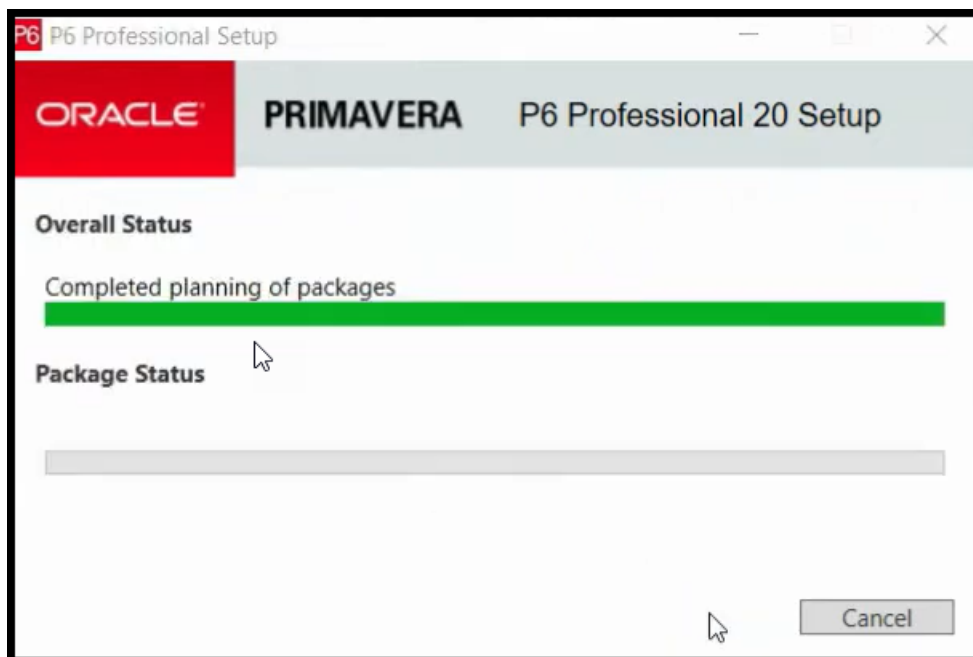

The next step is to choose the type “Typical”, then choose “Ok”.

Finally, choose "Install".

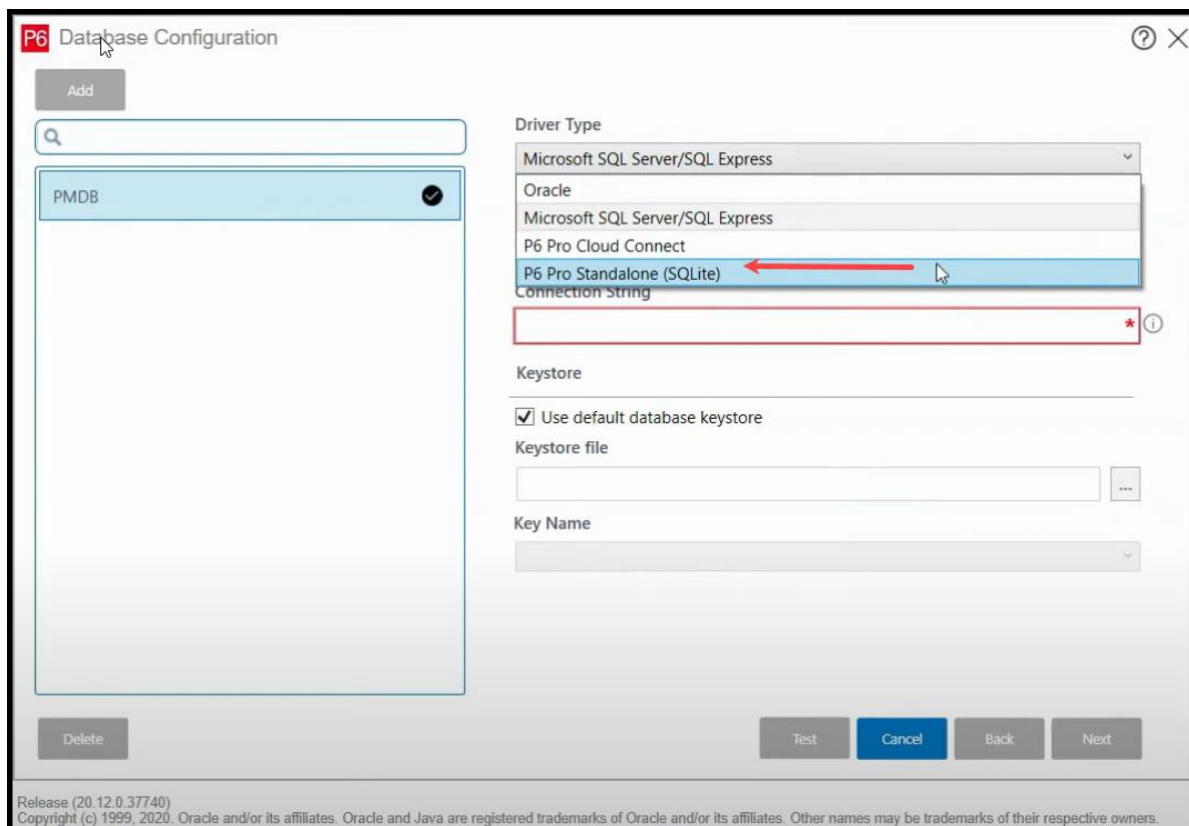

Do not click on "Cancel" till it is finished. If you do so, you will start it all over again.

Choose "Run Database Configuration".

After pressing "OK", choose "P6 Pro Standalone (SQLite)".

Choose "Add a new Standalone database and Connection".

The screenshot shows the 'P6 Database Configuration' window. On the left, there is a list of databases with 'PMD8' selected. Below the list are 'Add' and 'Delete' buttons. On the right, the 'Driver Type' is set to 'P6 Pro Standalone (SQLite)'. The 'Database Alias' is 'PMD8'. Two radio buttons are present: 'Add a connection to an existing standalone database' (unselected) and 'Add a new standalone database and connection' (selected). A red arrow points to the selected radio button. At the bottom right are 'Test', 'Cancel', 'Back', and 'Next' buttons. The footer contains release and copyright information.

Choose a "Login Name", "Personal Name", and select the password, then select "Next".

The screenshot shows the 'P6 Database Configuration' window with the 'Add a new standalone database and connection' option selected. The 'Login Name' field is filled with 'admin', the 'Personal Name' field is filled with 'esdin', and the 'Enter new password' and 'Confirm new password' fields are filled with dots. A red arrow points to the 'Login Name' field, another red arrow points to the 'Personal Name' field, and a third red arrow points to the 'Enter new password' field. The 'Base currency' is set to 'US Dollar' with a symbol of '\$'. The 'Abbreviation' is 'USD'. At the bottom right are 'Test', 'Cancel', 'Back', and 'Next' buttons. The footer contains release and copyright information.

Choose the “Database Location” and save. The configuration process is done now.
